This book examines the important role of consumer activism in health policy in different national contexts. In an age of shifting boundaries between state and civil society, consumer groups are potentially drivers of democratisation in the health domain. The expert contributors explore how their activities bring new dynamics to relations between service providers, the medical profession, government agencies, and other policy actors. This book is unique in comprehensively analysing the opportunities and dilemmas of this type of activism, including ambiguous partnerships between consumer groups and stakeholders such as the pharmaceutical industry. These themes are explored within an internationally comparative framework, with case studies from various countries.

This is the fifth in the series of annual reports linked to the UNEP Global Environment Outlook which seeks to bridge the gap between science and policy by reviewing major global and regional environmental issues and policy developments during the year 2006. The UNEP Year Book 2008 highlights the increasing complexity and interconnections of climate change, ecosystem integrity, human well-being, and economic development. It examines the emergence and influence of economic mechanisms and market-driven approaches for addressing environmental degradation. It describes recent research findings and policy decisions that affect our awareness of and response to changes in our global environment. In three sections, the UNEP Year Book 2008 focuses on recent environmental events, developments, and scientific findings.

Current Catalog

The Globalization of World Politics, the bestselling introduction to international relations, offers the most comprehensive coverage of the key theories and global issues in world politics. The eighth edition engages with contemporary global challenges, featuring a brand new chapter on Refugees and Forced Migration and updated coverage of decolonization to ensure the book continues to cover those topics that will define the key issues in IR into the future. Tailored pedagogical features help readers to evaluate key IR debates and apply theory and concepts to real world events. A fully updated Opposing Opinions feature facilitates critical and reflective debate on contemporary policy challenges, from decolonising universities to debates over migration and the state. Leading scholars in the field introduce readers to the history, theory, structures and key issues in IR, providing students with an ideal introduction and a constant guide throughout their studies. Students and lecturers are further supported by extensive online resources to encourage deeper engagement with content: Student resources: International relations simulations encourage students to develop negotiation and problem solving skills by engaging with topical events and processes IR theory in practice case studies encourage students to apply theories to current and evolving global events Video podcasts from contributors help students to engage with key issues and cases in IR Guidance on how to evaluate the Opposing Opinions feature, supporting students to engage in nuanced debate over key policy challenges Interactive library of links to journal articles, blogs and video content to deepen students' understanding of key topics and explore their research interests Flashcard glossary to reinforce understanding of key terms Multiple choice questions for self-study help students to reinforce their understanding of the key points of each chapter Revision guide to consolidate understanding and revise key terms and themes Instructor Resources: Case studies help to contextualise and deepen theoretical understanding Test bank - fully customisable assessment questions to test and reinforce students' understanding of key concepts Question bank - a bank of short answer and essay questions to promote students' critical reflection on core issues and themes within each chapter Customisable PowerPoint slides help to support effective teaching preparation Figures and tables from the book allow clear presentation of key data and support students' data analysis.

The Chemical News and Journal of Physical Science In About Science, Myself and Others, Vitaly Lazarevich Ginzburg, co-recipient of the 2003 Nobel Prize in Physics and Editor of the review journal Physics-Uspekhi, provides an insight into modern physics, the lives and works of other prominent physicists he has known, and insight into his own life and views on physics and beyond. Divided into three parts, the book starts with a review of the key problems in contemporary physics, astrophysics, and cosmology, examining their historical development and why they pose such a challenge to today's physicists and for society. Part One also includes details of some of Professor Ginzburg's work, including superconductivity and superfluidity. Part Two encompasses several articles on the lives and works of several prominent physicists, including the author. The third part is a collection of articles that provide a personal view of the author, describing his personal views and recollections on a range of wider topics. Taken together, this collection of articles creates an enjoyable review of physics, its philosophy, and key players in its modern development in the 20th Century. Undoubtedly, it will be an enjoyable read for professional physicists and non-scientists alike.
Carbon Pricing  This latest Fifth Assessment Report of the Intergovernmental Panel on Climate Change (IPCC) will again form the standard reference for all those concerned with climate change and its consequences, including students, researchers and policy makers in environmental science, meteorology, climatology, biology, ecology, atmospheric chemistry and environmental policy.

New Statesman Society Pollutants, Human Health and the Environment is a comprehensive, up-to-date overview of environmental pollutants that are of current concern to human health. Clearly structured throughout, the main body of the book is divided by pollutant type with a chapter devoted to each group of pollutants. Each chapter follows a similar format to facilitate comparison and discussion. For each pollutant, the authors describe the sources, pathways, environmental fate and sinks as well as known toxicological effects. Importantly, the second chapter on heavy metals and other inorganic substances deals with trace element deficiencies which can have serious problems for human health. Some rocks and soils are naturally low in some trace elements and intensive agriculture over the past half century has effectively mined many trace elements reducing their levels in soils and crops. The final chapter is a discussion about the various risk assessment frameworks and regulations covering the main pollutants. Comprehensive, up-to-date coverage of environmental pollutants of concern to human health Clearly divided into pollutant type with each chapter devoted to a different pollutant group Clearly structured throughout with the same format for each chapter to help facilitate comparison and discussion and enable readers to prioritise chemicals of concern Description of the sources, pathways, environmental fate and known toxicological effect Includes contributions from leading researchers and edited by a team of experts in the field

Shiphandling Simulation This latest Fifth Assessment Report of the Intergovernmental Panel on Climate Change (IPCC) will again form the standard reference for all those concerned with climate change and its consequences, including students, researchers and policy makers in environmental science, meteorology, climatology, biology, ecology, atmospheric chemistry and environmental policy.

Science Periodicals in Nineteenth-Century Britain From the interior of the Sun, to the upper atmosphere and near-space environment of Earth, and outward to a region far beyond Pluto where the Sun's influence wanes, advances during the past decade in space physics and solar physics—the disciplines NASA refers to as heliophysics—have yielded spectacular insights into the phenomena that affect our home in space. Solar and Space Physics, from the National Research Council's (NRC's) Committee for a Decadal Strategy in Solar and Space Physics, is the second NRC decadal survey in heliophysics. Building on the research accomplishments realized during the past decade, the report presents a program of basic and applied research for the period 2013-2022 that will improve scientific understanding of the mechanisms that drive the Sun's activity and the fundamental physical processes underlying near-Earth plasma dynamics, determine the physical interactions of Earth's atmospheric layers in the context of the connected Sun-Earth system, and enhance greatly the capability to provide realistic and specific forecasts of Earth's space environment that will better serve the needs of society. Although the recommended program is directed primarily at NASA and the National Science Foundation for action, the report also recommends actions by other federal agencies, especially the parts of the National Oceanic and Atmospheric Administration charged with the day-to-day (operational) forecast of space weather. In addition to the recommendations included in this summary, related recommendations are presented in this report.

The American Journal of the Medical Sciences "Significant characteristics of modern scientific journals, including their role in the certification and registration of scientific knowledge, emerged only toward the end of the nineteenth and into the twentieth century. The
nineteenth century was a period of rapid expansion and diversification in scientific periodicals, and this collection sets the historical exploration of those periodicals on a new footing, examining their distinctive purposes and character. Specifically, it shows the important role they played in expanding, developing, and organizing communities of scientific practitioners and devotees during a century that witnessed blanket transformations in the scientific enterprise.”

Nuclear Science Abstracts Peter McManners gets underneath the well-known facts about the unsustainable nature of the aviation industry and argues for fundamental change to our travelling habits. The first book to transcend the emotional debate between the entrenched positions of those who are either for, or against, flying, this groundbreaking work argues that aviation is stuck in a stalemate between misguided policy and a growing imperative to deal with its environmental impact and that there is now little possibility that the transition to sustainable flying can be a smooth evolution.

The Education Gazette of the Province of the Cape of Good Hope As a result of major shipping disasters on all coasts, the safety of vessel operations in U.S. ports and waterways and the effectiveness of waterway designs are under increased scrutiny. But are traditional waterway design practices that rely heavily on rules of thumb and conservatism providing adequate margins of safety while keeping the overall costs of waterway projects within the funding capabilities of local project sponsors? Shiphandling Simulation addresses how computer-based simulation can be used to improve the cost-effectiveness of waterway design while satisfying safety objectives. The book examines the role of computer simulation in improving waterway design, evaluates the adequacy of data input, explores the validity of hydrodynamic and mathematical models, assesses required and achievable accuracy of simulation results, and identifies research needed to establish shiphandling simulation as a standard design aid. Case studies of waterway design efforts employing shiphandling simulation are analyzed and lessons learned are identified.
